Foreword

This *Congressional Action* report describes the results of congressional action on President Bush's proposed budget for research and development (R&D) for fiscal year (FY) 2004. It reviews the course of events taken by the congressional budget process during the past year and compares the congressionally approved FY 2004 funding levels for major R&D agencies and programs with the President's request and with estimated FY 2003 levels.

The *Congressional Action* report completes the series of AAAS reports on R&D in the FY 2004 budget. It is a companion piece and follow-up to *AAAS Report XXVIII: Research and Development FY 2004*, published in April 2003. Supplemental information, including historical data and the complete text of both reports, is available on the AAAS R&D Web site (<http://www.aaas.org/spp/rd>; see Appendix 3). Because of the unusually late conclusion of the FY 2004 budget process in January 2004, just before the release of the FY 2005 budget proposal, this publication will be available online only, and not in print.

This report was prepared in collaboration with the Intersociety Working Group, whose organizations are listed below. The authors are grateful to the members of these bodies who have contributed to the effort, as well as to individuals in federal agencies and on congressional staffs, especially the staff in the Energy and Science Division of the Office of Management and Budget.
