THE FY 2009 BUDGET SITUATION

- The federal government had a record budget deficit of \$455 billion in FY 2008, and will have an even larger deficit in 2009.
- Domestic appropriations have barely kept pace with inflation since 2004.
- Historically, federal R&D investments have closely tracked trends in discretionary spending.
- FY 2009 appropriations are unfinished, and an emergency economic stimulus bill is under consideration.

Trends in Discretionary Spending, FY 1976-2013

in billions of constant FY 2008 dollars

Data in fiscal years. Source: *Budget of the United States Government, FY 2009*. FY 2008 data are estimates. FY 2009-2013 data are budget projections. FY 2009-2013 figures exclude Iraq and Afghanistan military costs.

THE FY 2009 BUDGET

FY 2009 has started, but only 3 departments (DOD, DHS, VA) have their final 2009 budgets.

The remaining federal agencies are operating under a CR (continuing resolution) at or below 2008 levels through March 6.

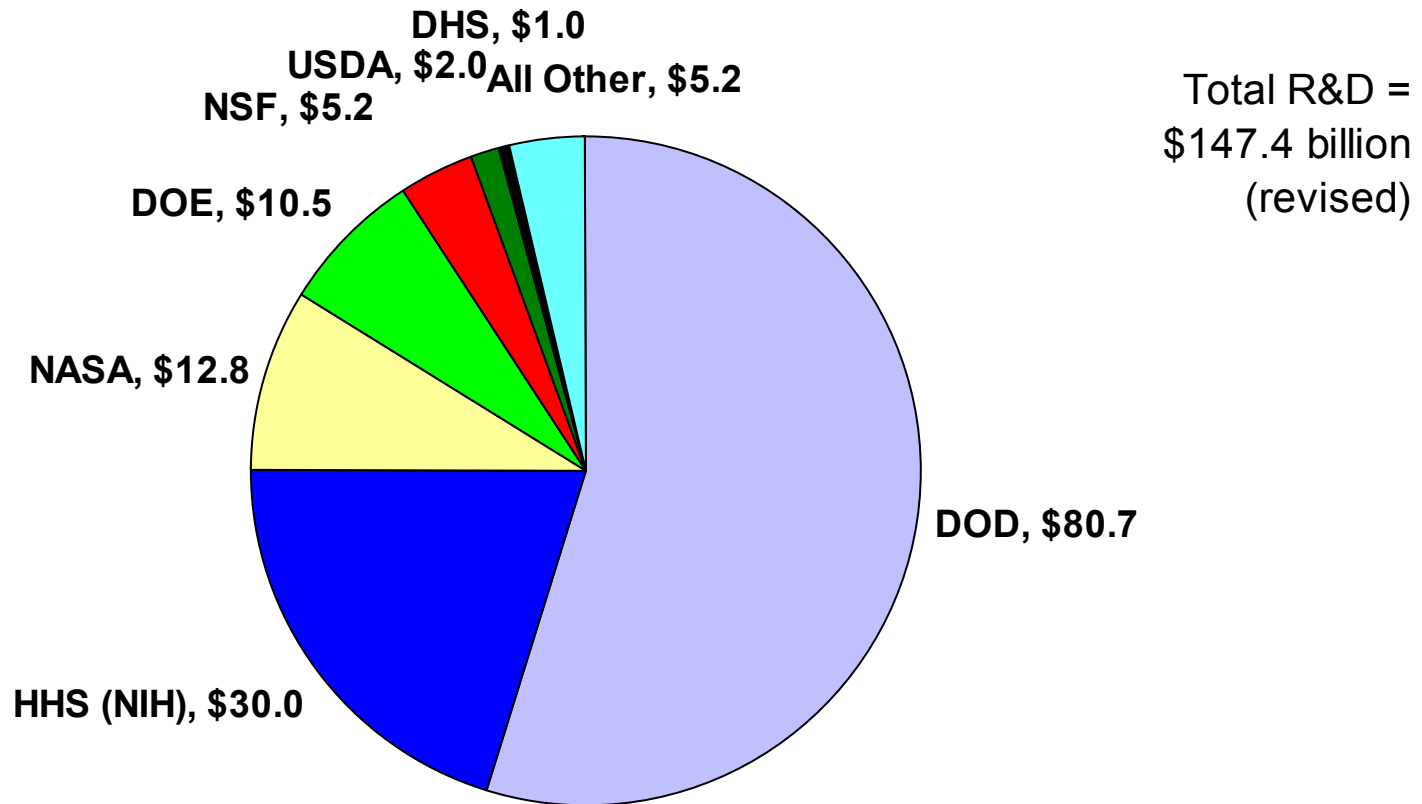

Because President Bush threatened to veto any appropriations bills that exceed his request, Congress has delayed the bills, which would collectively add \$21 billion to the request for domestic programs.

The new 111th Congress plans to send the remaining 9 (of 12) 2009 appropriations bills to President Obama in January or February.

There may also be 2009 supplementals for NIH, DOE, and other science agencies as part of an economic stimulus package.

THE 2009 BUDGET FOR R&D

- The ACI continues for a third year, with large increases for NSF, DOE Science, and the NIST labs to catch up to a 10-year doubling track.
- Again, there would be large increases for DOD weapons and NASA spacecraft development, but also increases for most R&D programs.
- The NIH budget would be flat, agricultural and environmental R&D agencies would decline.
- Congress has a long way to go in finalizing 2009 appropriations, but is hoping to add money to the request, especially for energy, biomedical, and environmental R&D.

FY 2009 R&D Request

Percent Change from FY 2008

HOW DOES THE U.S. COMPARE?

- The U.S. is still the leading science and technology superpower in R&D investments, but the lead is shrinking.
- The U.S. R&D / GDP ratio compares favorably with other nations, but defense development is a big factor in the U.S.
- Other nations:
 - EU – A plan to reach 3% of EU GDP by 2010, but it won't happen.
 - Korea – R&D growing by 10%+ a year, R&D/GDP ratio surpasses U.S. ratio in 2004 and hits 3%.
 - China – R&D spending grew 20% in 2004 and 25% in 2005; basic research still small, but expanding rapidly.
 - India – Not big in R&D spending yet, but there are plans to boost its R&D capabilities to compete in high-tech industries.

WHERE IS FEDERAL R&D FUNDING HEADED?

- The new Congress and President Obama could finish FY 2009 appropriations with increased funding for key R&D programs, and could split funding between the economic stimulus bill and an omnibus appropriations bill.
- The FY 2010 budget proposal will be released in April; it will be the first budget to be formulated under current economic conditions.
- Even at a time when policymakers are concerned about U.S. leadership in science and technology eroding, and when proposed R&D increases are authorized in the America COMPETES Act and other legislation, the problem is how to find the resources in a recession. New sources of revenue (such as from climate change legislation for energy R&D) may be years away.
- Don't expect increased funding for research: the broader budget choices policymakers make will constrain future investments in R&D.
